Statewide Landslide Information Database for Oregon
Release 3.0
2014

**REVIEWERS**

Ian P. Madin, Chief Scientist
STATE OF OREGON

**REFERENCES**

Burns, W. J., Madin, I. P., and Ma, L., 2008, Statewide landslide in formation database for Oregon communities become more resilient from the impacts of landslide hazards through pre-emptive actions, 11 p., scale 1:750,000, Esri format geodatabase. 45 p., 1 pl., database for Oregon, release 2 (SLIDO-2): Oregon Department of Geology and Mineral Industries, 2011; Burns, W. J., Madin, I. P., and Ma, L., 2008, Statewide landslide in formation database for Oregon communities become more resilient from the impacts of landslide hazards through pre-emptive actions, 11 p., scale 1:750,000, Esri format geodatabase. 45 p., 1 pl., database for Oregon, release 1 (SLIDO-1): Oregon Department of Geology and Mineral Industries, 35 p., 1 pl., scale 1:750,000, Esri format geodatabase for Oregon, release 3 (SLIDO-3.0) is a compilation of landslide, debris flow, and liquefaction products published as SLIDO-2 and SLIDO-1. Additional products of regional significance include: the Statewide Landslide Information Database for Oregon (SLIDO-3.0) and 1971-1975 landslide inventories from CLEO-1 (1971-1975 landslide inventories from CLEO-1) and CLEO-2 (1976-1980 landslide inventories from CLEO-2). The authors are grateful to those engaged in the critical review of the database. The authors also gratefully acknowledge contributions to the database.

**EXPLANATION**

The editors, authors, and reviewers cannot attest to the quality of the data in the past regarding landslide deposits, the quality of the data used to construct these deposits, and the quality of the information on the deposits contained in the database. We urge the user to consult the references listed in the database for more information on the quality of the data and the methodology used in creating the database. The data are intended to be used to assess the potential for landslide hazards and to assist in mitigation planning. The data are not intended to be used for engineering or construction purposes.

**LICENSES**

This product is for informational purposes only and has not been prepared for or for any use in preparing an engineering or construction map. The data can be used to assess the potential for landslide hazards and to assist in mitigation planning. The data are not intended to be used for engineering or construction purposes.

**ACKNOWLEDGMENTS**

The authors are grateful to those engaged in the critical review of the database. The authors also gratefully acknowledge contributions to the database. We urge the user to consult the references listed in the database for more information on the quality of the data and the methodology used in creating the database. The data are intended to be used to assess the potential for landslide hazards and to assist in mitigation planning. The data are not intended to be used for engineering or construction purposes.

**LIMITATIONS**

The data are intended to be used to assess the potential for landslide hazards and to assist in mitigation planning. The data are not intended to be used for engineering or construction purposes. The data are not intended to be used for engineering or construction purposes. The data are not intended to be used for engineering or construction purposes. The data are not intended to be used for engineering or construction purposes. The data are not intended to be used for engineering or construction purposes.
