

## SEISMIC STATUS REPORTS

### Can I submit reports for previous years?

Yes, you may submit reports for previous years anytime. Reports were first required for 2007-2012 and then for every year after.

### What period of time do reports cover?

Reports are for the 2015-16 school year. To ensure information regarding your district is complete, please provide information about all projects completed between submission of the 2015 form and the 2016 form.

### Do charter schools need to submit reports?

If a school is not housed in a state-owned building, no report is needed.

### I don't see my school district or ESD on the form's dropdown list. What should I do?

Please contact us at [seismicfeedback.dogami.state.or.us](mailto:seismicfeedback.dogami.state.or.us) so we can add your district.

### If my district made non-structural improvements, such as securing furniture, should that be reported?

Reporting of such information is not required. However, if your district has taken steps to improve the safety you may certainly note those improvements on the feedback form.

### I am having a problem with the report form.

Please contact us at [seismicfeedback.dogami.state.or.us](mailto:seismicfeedback.dogami.state.or.us).

### Where will these reports be posted?

Reports are posted on [OregonGeology.org](http://OregonGeology.org), on the [Seismic Status Reports page](#).

### Why weren't some school districts included in the 2007 DOGAMI evaluation?

According to the [full seismic report](#), section 2.1: Qualifying Buildings: K-12 Public Schools and Education Service Districts (ESD): "In the absence of a data set containing capacity information, DOGAMI used the Oregon Department of Education's 2005-06 schools enrollment database to determine the qualifying schools sites. Initially, we selected an enrollment of 200 as the cutoff; we then increased the number of schools assessed by employing two additional rules:

- At least 90% of each county's enrolled students must be included
- 100% of public schools potentially at risk of tsunami inundation must be included

All 1,030 schools in the state with an enrollment of 154 or higher, along with 71 schools with enrollments ranging from 8 to 153, were included. The process resulted in the inclusion of nearly 97% of all enrolled K-12 students. 171 school districts had at least one school included; 39 school districts had no schools included. Only one Education Service District (ESD) school was included. Three schools administered by the Department of Education were included."
