This Map was made by Philo H. Anderson of Baker City, Oregon, prepared from the notes of a survey made by Philo H. Anderson and Henry C. Neilion in September 1912. The bearings were taken from survey notes, the topography as determined by the area described in the field, and the positions of the points from a map made by the United States Geological Survey. The points of the boundary of the town of Baker and the town of Elk are shown by special marks. Surveys were done by aerial photography and by vertical angles and distances.
