

NAME: McCord's Gulch Claims Weatherby District Baker County

OWNERS: C.E. Worthington, Huntington, Oregon
J.D. Jones, Box 265, Huntington, Oregon, located with Worthington who has since bought him out.

LOCATION: $\frac{1}{2}$ mile east of Sisely Creek up McCord's Gulch *NE Sec 20, T12S, R41E*

AREA: 2 unpatented quartz and 1 placer claims.

HISTORY: located in 1922 and 1937. Entire gulch was placered out 50 years ago during the Chicken Creek Placer boom.

GEOLOGY: The placer claim is located 235 ft. higher in elevation than Sisely Creek. For the first half mile up McCord's Gulch the bedrock is black talcose schist striking north and south standing vertical. It is then cut by granite which continues to the east. The placer claim lies across the granite contact. Numerous xenoliths of argillite more or less altered to mica schist, mostly striking northeast and dipping steeply to the southeast. The amount of gravel is very small and consists mostly of material which is washed down since old placer operation. Probably values are very small in the gravel as none could be panned on the property when the visit was made. Such gold as is present is probably derived from the quartz stringers of the granite lying up stream from the claim. 1 such stringer only 100 yards northeast of the placer workings is being developed by a short tunnel at the present time.

MISCELLANEOUS: Water is very slight but fairly constant. There is no timber and recommendation was made that the placer claim be abandoned.

DATED: September 23, 1938.

J. Allen

9/23/38 McCord's Gulch

- 1) Lave da claims ~~Sisley~~ Weatherly Baker.
- 2) J.D. Jones, Box 265, Huntington. (bought out by Washington)
C.E. Washington
- 3) NE corner of section 20, R44E, T12S. 1/2 m. E. of Sisley up
- 4) Three (2 qtz and 1 place) McCord's Gulch.
- 5) Located talc 1922; others Feb. 1937. Entire gulch placed out 50 yrs. ago. Rd. up. Barling, checker ch into chs. horse, etc. 28
