The drainage in which Strouba Mine is located was only recently assigned to this District so we had to do some research to answer your questions.

1. The type of mine is gold
2. One shaft is all I have seen. It is about 15 feet deep.
3. The native rock is ryholite
4. The mine was active from 1929 to 1933. There doesn’t seem to have been any activity there for years except souvenir hunters.
5. Information from the District Ranger at Glide, Oregon

WILLIAM R. TAYLOR
District Ranger
April 21, 1972

Mr. William R. Taylor, District Ranger
Toketee Ranger Station
Toketee Route, Box 101
Idleyld Park, Oregon 97447

Dear Mr. Taylor:

Thank you very much for the information on the Stroubs mine; also please convey my thanks to Mr. Hazen for sending information on the Loughs mine. We will perhaps someday get into the area and have a first-hand look at these; but until that time, the information you sent will have to suffice.

Sincerely,

Len Ramp
Resident Geologist
