---

MI-21
ORIENTAL (placer) North Fork District North Fork Area

Owner: Walter Allison, Ukiah, Oregon. (See also Ralph Davis, Inc.)

Location: NE¼ and W½ sec.10, T.7 S., R.33 E.
Area: 175 acres in 8½ claims.

History: High bar at the center of the N¼ sec.10 worked from 1902-1908 by water developed from Oriental Creek by a ditch. The lower bar in the SE¼ of the NW¼ sec.10 was worked by dragline in 1934-1936, and about 13,000 yards were mined with a recovery of from $.30 to $.35 per yard. Considerable virgin ground remains in this bar.

Geology: The bedrock is granitic, is soft and can be shovelled. Down river from the bridge it is mostly slate for 1/2 mile to the edge of sec.10. Slate appears below the mouth of Basin Creek. There are only small amounts of clay in the gravel, the boulders of which average less than 1 foot in diameter, usually much less. Gold is rather heavy but flaky and is found mostly on bedrock. 80 percent of the gold is found within 6 inches of the bedrock at this point. Gravel on the low bar averages 12 feet in depth. The gravel is said to average $.60 per yard.
