The Compton Mining Company’s vein is in slate and serpentine. An incline 140 feet deep has been sunk on a 4-foot vein of ore which averages about $15. The shoot is said to be at least 125 feet long. Rich ore is found on the walls from 6 inches to a foot wide. The ore contains some galena and a trace of copper in massive arsenical iron and zinc sulphides. Only the assessment work is done each year.
