Sundry Notice Attachment

SN-050-96-25

This Sundry Notice modifies Geothermal Drill Permit GDP-050-95-03 for Production Well 86-21 to repair the casing.

1. The test for the cement squeeze job shall be to 100 psi surface pressure for 30 minutes.
2. After the 330 feet of patch casing has been run and cemented the patch shall be tested to 1000 psi surface pressure for 30 minutes.
3. A test of the casing above the production casing is required prior to doing a flow test. At a minimum this would entail a series of temperature logs run immediately after fluid injection has stopped.
