**Name**: GEO CORE HOLE N-2
**Company**: GEO NEWBERRY
**Lease**: Deschutes
**Location of NE Corner Sec**: 29 T 21S R 12E
**Spud Date**: 8-15-86
**Completed**: 10-28-86
**Depth**: 4387.5

### Bottom Hole Temperatures While Drilling

</table>

**Comments**: Temperature are generalized. For specific depths and temps, refer to well data package.

**Interpretation**

- **0-370**: Sequence of basaltic andesite andesite flows, and interflow breccias and cinder/scoria zones.
- **370-481**: Sequence of basaltic andesite flows, and interflow breccias and cinder/scoria zones.
- **481-955**: Sequence of basaltic andesite andesite flows, and interflow breccias and cinder/scoria zones. Ashfall tuff at 950-960 ft. M.D.
- **955-1384**: Sequence of lithic tuffs, pumice lapilli tuffs, pyroclastic debris flows, black glass flows, and rhyodacite/rhyolite flows at 1371-1394 ft. M.D.
- **1384-1752**: Sequence of basaltic andesite flows, and interflow breccias and cinder/scoria zones. Ashfall tuff at 1743-1752.5 ft. M.D.
- **1752.5-3167.5**: Rhyodacite/rhyolite flows interstratified with lithic tuffs and black glass flows.
- **3183-4387.5**: Sequence of basaltic andesite flows, and interflow breccias and cinder/scoria zones.
- **4387.5-5900**: Note: 0-481' interpretation from cuttings. 481 to T.D. interpretation from core.
