This is a form used to report wells and stratigraphic holes. It is completed by the Department of Geology and Mineral Industries for each well or hole drilled in Oregon. The information is used to maintain records of wells and holes, including completion dates, depths, and completion methods. The form includes sections for drilling companies, operators, and examiners to provide details about the wells and holes they have drilled or completed in Oregon.

The form includes the following sections:

- **Notice of completion:** This section includes information about the completion of a well or hole. It includes details such as the date of completion, the depth of the well or hole, and the completion method.

- **Notice of testing:** This section includes information about the testing of a well or hole before it is put into use. It includes details such as the date of testing, the depth of the well or hole, and the testing method.

- **Notice of closure:** This section includes information about the closure of a well or hole. It includes details such as the date of closure, the depth of the well or hole, and the closure method.

- **Additional sheets as needed:** This section includes additional sheets as needed to provide more detailed information about the well or hole.

The form is used to report wells and stratigraphic holes in Oregon, including details about the completion, testing, and closure of wells and holes. The information is used to maintain records of wells and holes, including completion dates, depths, and completion methods.
