Volcanic Breccia - green & black crushed igneous fragments now resembles sandy tuff or fine breccia - larger pieces may have been crushed in coring.

Tuff? - firm to hard dk gray to black dense fragments in a soft matrix - May be a weathered basalt. Calcite & siliceous veins present in part of core.

Basalt? - hard, tough, dense, black basalt in a softer matrix of same color. May be a weathered (decomposed) basalt or a breccia.
