Hastings, known to me to be the person whose name is subscribed to the above instrument, who being by me duly sworn on oath state that he is authorized to make this report and has knowledge of the facts stated herein and that said report is true and correct.

Subscribed and sworn to before me this 9th day of July 1957

Marion C. Johnson

Notary public in and for State of Washington

My commission expires March 28, 1961
Plugging of Kirkpatrick No. 1 Well - permit no. 23.

Location: T. 43, R. 21 #, Sec. 6, Condon Area.

Operator: Standard Oil Company of California

General: The writer was present at the well site on June 21, 1957 when a cement plug was placed in the hole by the Haliburton Company. A slurry was made from 150 bags of cement and pumped down the drill pipe to a depth of 2000 feet. According to Mr. Ferguson this should fill the interval between approximately 2000 feet and 1660 feet.

The following day after the plug had set, the drill mud above the plug was to be displaced with fresh water and a steel plate is to be welded over the surface casing before the well is abandoned. Because the land owner, Mr. Kirkpatrick, wishes to use the hole as a water well and has obtained a permit to do so, no surface plug was emplaced.

According to information received from Mr. Webb at the time of visit the total depth of the hole is 3726 feet. The upper 205 feet of the hole is 17 inches in diameter and is cased with 13 3/8 inch O.D. pipe. The interim is filled with cement. Below 205 feet the hole is 9 7/8 inches in diameter and is not cased but is filled with heavy drill mud below the above mentioned plug.
