Drilling Program
(28-06-05)

OPERATOR
Methane Energy Corp

WELL NAME
Beaver Hill #2

LEGAL LOCATION, SHL
NE SE SW Sec. 12, T27S R14W

LEGAL LOCATION, BHL
SE SW SW Sec. 12, T27S R14W

COUNTY, STATE
Coos County, OR

DATE
28/06/05

EST. TOTAL DEPTH
4836'

SURFACE LOCATION
1047' FSL, 2175' FWL

SURFACE ELEVATION
319' ASL

RIG CONTRACTOR
Roll’n Drilling

KB ELEVATION

CONSULTANT
R. Ranger

API NO.
N/A

1. Drill 12 ¾” hole to 500’ minimum.

3. Drill out surface casing with 7 7/8” bit. Drill to KOP @ 550 ft., Directionally drill 7 7/8” hole to 4836’ TVD (4950” MD). To a proposed bottom hole location of 307’ FSL & 1215’ FWL.

4. No cores anticipated.

5. Run Gamma-ray, Induction Electric, Sonic, Density & Neutron logging on interval 500’-TD.

6. Run and cement 4 ⅜, 11.6 #, J-55 production casing full length w/ approximately 900 sacks of Halliburton "premium plus" cement mixed at 12.5 and 13.5 lb/gal.

7. Following cementing, the casing/surface casing annulus will be tested to insure pressure isolation.

9. In the case of abandonment, a cement plug will be set across the surface casing shoe at the direction of ODOGAMI.

10. The well will then be capped with an approved wellhead or otherwise as directed by ODOGAMI and held for future data acquisition such as pressure data and permeability data in selected coal zones.

11. The well is to be drilled from a common "padsite". Wellsite reclamation shall be undertaken when all the wells drilled from this padsite are abandoned.

Notes:
Hole is located on Coos County surface and mineral ownership under lease to MEC.
BOPs will be used to control well pressures.
A closed mud system with solids control will be used on the Beaver Hill #2.
Lined reserve pits will also be constructed.
Decisions for logging run(s) will be made based on hole condition.
Fresh water will be delivered by truck and stored on location.
