Description of Side Wall Samples
P. S. Day, December 1, 1963

3810' Rec. 1-1/4" pebble conglomerate, dk. gy. and dk. reddish brown, subrounded, altered, crushed pebbles of basalt in tight, crumbly basaltic sandy claystone matrix, with some intergranular secondary white mineralisation.

3820' Rec. 3/4" Sandstone, dk. greenish gy., fine, silty, clayey, very poorly sorted, basaltic, tight. In part pebble with subrounded altered basalt pebble lith.

3826' No recovery.

3838' No recovery.

3850' Rec. 1-1/2" Siltstone, med. gray, firm-friable, clayey, sdy. in part, occasional coarse size altered, rounded basalt grain, tight.

3978' Rec. 1" Silty sandstone, med. greenish gy. splotched with dk. gy., silty, clayey, altered basaltic grains, poorly sorted, fine to very coarse, tight.

4040' Rec. 1/2" Conglomerate, shattered sample, appears to be fragments of altered basalt pebbles in a tight graywacke type clayey sandstone matrix.

4076' Rec. 1-3/4" Clayey siltstone, med. bluish gy., sheared, firm-friable, with few grains and small pebbles of alter basalt and reddish rock, tight. Rare (one) foram (?) noted.

4112' Rec. 1/2" Siltstone, dk. gy.(damp), firm, clayey, very fine sandy, tight, possibly very low porosity?

4120' Rec. 2" Siltstone, med. bluish gray, friable, clayey, almost a claystone, shot with 1/16" thick calcite veins.

4125' Rec. 1-1/2" Ss., med. greenish gy., firm-friable, silty, clayey matrix, with poorly sorted round fine to coarse altered basaltic grains. Possible very low p&P.

4320' Rec. 2" Siltstone, dk. dy.(N3), firm-friable, very fine sandy, clayey, tight.

4410' No recovery.

4458' Rec. 1" Siltstone, med. greenish gy., firm-friable, clayey, basaltic, very fine sandy, tight to very low P&P.

Description of Side Wall Samples - Cont'd
P. S. Day, December 1, 1963

4476' No recovery.

4496" Rec. 1/4" Sandy siltstone, med. greenish gy., firm-friable, clayey, very fine sandy, basaltic, tight to very low p&P.

4568' Rec. 1/4" Sandy siltstone, very like last above.

4650' Rec. 1" Sandy siltstone, lt. greenish gy., very fine sandy, altered basalt, feldspar (?) and speckled with red fine grains, clayey, possible low p&P.

4724' Rec. 1-1/2" Sandy siltstone, as last above.

4846' Rec. 3/4" Sandy siltstone, as above, slightly more clayey, poorly sorted, tight.
