The following is a detailed account of the proposed work:

Following the removal of the 3/4" production tubing, the 3/4" rods, the downhole pump and plunger, and the associated surface equipment, it is to be replaced by the current tubing, support and plunger. A cement plug will be placed at the current tubing stop, but in any case the plug will be replaced at the surface in accordance with the specifications. Bracing mud will be replaced by the plug if necessary. The casing will be cut off at the proper level and a metal casing cement in place. The reserve line will be filled and a 1/2" relief valve will be installed and the remaining pit will be flushed with water.
