FOREWORD

Just as the index of a book points directly to the subject matter which one wishes to consult, so does a bibliography assemble in systematic form titles and authors' names of published material on any subject. Thus the researcher is provided with a time-saving tool.

In 1936 the State Planning Board issued a bibliography of published reports on the geology and mineral resources of Oregon. This valuable reference book, prepared by Mr. Ray C. Treasher, economic geologist, and Dr. Edwin T. Hodge, professor of economic geology at Oregon State College, has been widely used.

During the succeeding ten years more than one thousand reports and articles on Oregon geology and related subjects have been published; therefore the need for a supplement to the original bibliography is evident, and the present volume is designed to supply that need.

INTRODUCTION

This volume is a supplement to the one with a similar title prepared by Ray C. Treasher and Edwin T. Hodge for the Oregon State Planning Board and published in 1936 by Conger Printing Company, Portland, Oregon.

Two chief differences in make-up will be noted. First, the serial number system has been abandoned in favor of the numerical listing of references by date of publication under each separate author, a system used in the bibliographies of the U.S. Geological Survey. Second, the subject index has been divided into sections, representing the chief divisions of the geological sciences. There are many duplicate references in the index resulting from this system, but it is believed that the various subjects will be more easily found in this type of index.

Unfortunately, time was lacking to continue the admirable practice of supplying abstracts or summaries of each of the articles by which Mr. Treasher made his volume almost a textbook on Oregon geology. It was also found impossible to give references listing the libraries in the Northwest where the publications mentioned are on file.

Numerous references from Washington, Idaho, and California are included. Political boundaries have little regard for natural resources or geologic features, and much of the story of Oregon geology depends upon features better described in adjacent states.

This bibliography attempts to include all references to geological and mining subjects in Oregon, but undoubtedly items have been overlooked. The compiler will appreciate having such items called to his attention, so that they may be included in later publications by the Department. A few items will be noted with dates prior to 1936. These were omitted from previous bibliographies.

Valuable assistance in the compilation of this volume was given by Ray C. Treasher and by Elinor Kinsley and Hazel Quasdorf, Oregon State College Library, who furnished lists of references which they had prepared. Lloyd L. Ruff also contributed a number of references. The Department and the compiler gratefully acknowledge their cooperation, and also wish to take this opportunity to express appreciation for the careful and painstaking typing of the final draft by Lillian F. Owen.
