Be alert for landslides across much of northwest and southwest Oregon

Portland, OR—The National Weather Service has issued a flood watch for portions of Northwest Oregon and Southwest Washington, including the Cascade and Cascade Foothills, Coast Range and Willapa Hills, Columbia River Gorge, Willamette Valley and Greater Portland Metro Area, Lower Columbia and I-5 Corridor in Cowlitz County, Northwest Oregon and Southwest Washington Coast, as well as a portion of southwest Oregon, including the Curry County coast and South Central Oregon coast for the evening of Monday, January 11, through the morning of Wednesday, January 13.

Heavy rain can trigger landslides, rock fall, and debris flows in steep terrain, and the risk is higher in burn areas.

Find the latest information here: <https://alerts.weather.gov/cap/or.php?x=1>

Debris flows are rapidly moving, extremely destructive landslides. They can contain boulders and logs transported in a fast-moving soil and water slurry down steep hillsides and through narrow canyons. They can easily travel a mile or more. A debris flow moves faster than a person can run. People, structures and roads located below steep slopes in canyons and near the mouths of canyons may be at serious risk.

If your home, work, or route is in a watch area:

- Stay alert. Track the flood watch by radio, TV, weather radio or online. If told to evacuate, do so immediately.

- Listen. Unusual sounds might indicate moving debris, such as trees cracking or boulders knocking together. A trickle of falling mud or debris may precede larger landslides. If you think there is danger of a landslide, leave immediately.
- Watch the water. If water in a stream or creek suddenly turns muddy or the amount of water flowing suddenly decreases or increases, this is a warning that the flow has been affected upstream. You should immediately leave the area because a debris flow may soon be coming downstream.
- Travel with extreme caution. Assume roads are not safe. Be alert when driving, especially at night. Embankments along roadsides may fail, sending rock and debris onto the road.
