**LONG AND SLOW, TIME TO GO!**

**IF YOU FEEL STRONG SHAKING, A TSUNAMI MAY BE COMING...**

- **Drop, Cover, and Hold On** until the earthquake is over. Protect yourself.
- **Run Inland to High Ground.** LEAVE IMMEDIATELY. DO NOT WAIT for an official warning. GO ON FOOT.
- **Follow Evacuation Route Signs and Arrows** to your nearest safety destination out of the tsunami zone.
- **Do not slow down.** Maintain your speed until you leave the tsunami zone. Safety may be identified by BLUE LINES painted across the road or by an Assembly Area* sign. Once safe, go to the nearest Assembly Area* or neighborhood gathering site.
- **Do not return to the beach.** Large waves may continue to come onshore for up to 12 hours. WAIT for official NOAA tsunami cancellation and a cautionary re-entry notice by local emergency officials before returning to low lying areas.

**HOW TO USE THIS MAP**

1. On the tsunami evacuation map, find the nearest colored arrow to your location.
2. Arrow path shows your evacuation route to high ground. Maintain your speed until you reach high ground. Do not slow down. The safety zone may be identified by blue lines painted on the road, “Leaving Hazard Zone” signs, or Assembly Area.
3. Arrow color indicates how fast you must travel. If there is more than one arrow next to your starting location, the slower speed is sufficient.
4. Maintain your speed until you leave the tsunami zone. Do not slow down. The safety zone may be identified by blue lines painted on the road, “Leaving Hazard Zone” signs, or Assembly Area.
5. Orange dotted lines define neighborhood evacuation zones. These zones provide a way to determine your safety destination without knowing your exact location.
6. If you can safely take a faster route, take it!
The work presented on this map is based on cartographic design by the University of Oregon InfoGraphics Lab, Department of Geography, in conjunction with the Oregon Department of Geology and Mineral Industries.

End of note.

1. Find the nearest colored arrow to your location.
2. Maintain speed shown by route color until you reach high ground.
3. Use neighborhood evacuation zones and arrows to determine fastest evacuation route.
4. If you are aware of a more direct route, take it!

Speed is based on starting to evacuate 10 minutes after the start of the earthquake.

- Walk: >1.5 mph
- Jog: > 4 mph
- Sprint: > 5.5 mph

Do not slow down.

Leave immediately.
