IF YOU FEEL AN EARTHQUAKE:
- Drop, cover, and hold
- Move immediately inland to higher ground
- Do not wait for an official warning

SI USTED SIENTE EL TEMBLOR:
- Tírese al suelo, cúbrase, y espere
- Déjese de inmediato a un lugar más alto que el nivel del mar
- No espere por un aviso oficial

OUTSIDE HAZARD AREA:
- Evacue a esta distancia del tsunami hasta 35 millas náuticas.

LOCAL TSUNAMI:
- Zona de evacuación para todos los terremotos cerca de la costa de Oregon.

DISTANT TSUNAMI:
- Zona de evacuación para un tsunami distante de un terremoto lejos de la costa de Oregon.

MAP SYMBOLS / SÍMBOLOS DEL MAPA:
- Evacuation route / Ruta de evacuación
- Assembly area / Área reunión
- Bridge / Puente
- School / Escuela
- City Hall / Municipalidad
- Fire department / Bomberos
- Law enforcement / Policía
- Hospital / Hospital
- Airport / Aeropuerto
- Hospital / Hospital
- Elevation, in feet / Elevación, en pies

SCALE / ESCALA:
- 1/25 mile / 1/25 km

This tsunami evacuation zone map was developed by DOGAMI and reviewed by the Oregon Department of Emergency Management. It is intended to guide you to a safe place in case of a tsunami.
WHAT TO DO for both local and distant tsunamis

1. Evacuate on foot, if at all possible. Follow evacuation signs and arrows to an Assembly Area.
2. If you need help evacuating, do something to get the attention of local emergency officials. Make it large waves may continue to come onshore for several hours.
3. Stay away from potentially hazardous areas until you receive an ALL CLEAR from local officials. Tsunamis are often follow very long evacuation channels and dangerous waves can persist for several hours. Local officials must inspect areas to determine if an evacuation is needed. If the emergency is large, it is unlikely that anyone will help you, so make a plan and be prepared.
4. After evacuation, check with local emergency officials if you think you have special skills and can help, or if you need assistance locating lost family members.

DO NOT WAIT until the 1937 earthquake is over; protect yourself and your family and friends.

WHAT TO KNOW about tsunamis

Distant tsunamis will take hours or more to come, where you will feel no earthquake, and the tsunami will generally be smaller than that from a local earthquake. Typically, there is time for an official warning and evacuation to be initiated.

Evacuation for a distant tsunami will generally be indicated by an announcement over NOAA weather radio that the local area has been put into an official TSUNAMI WARNING. If you do not hear an announcement, a sudden change of sea level should prompt you to move immediately to high ground. If you see a sudden sea level change, first evacuate away from shoreline areas, then return to your low ground or media as local officials announce an ASSEMBLY AREA.
