If you feel an earthquake:
• Drop, cover, and hold
• Move immediately inland to higher ground
• Do not wait for an official warning

Si usted siente el temblor:
• Tómeselo en serio, cúbese, y espere
• Diríjase de inmediato a un lugar más alto que el nivel del mar
• No espere por un aviso oficial

Outdated: This tsunami evacuation zone map was developed by DOGAMI in 2013.

MAP SYMBOLS / SÍMBOLOS DEL MAPA
- Evacuation route / Ruta de evacuación
- Vertical evac. structure / Estructura de evacuación vertical
- Assembly area / Área de reunión
- Bridge / Puente
- School / Escuela
- Fire Department / Bomberos
- Law enforcement / Policía
- Hospital / Hospital
- Lighthouse / Faro
- U.S. Coast Guard Station / Estación de la Guardia Costera
- Trail / Sendero

≈ Elev. in feet / Elevación, en pies
≈ Elev. in meters / Elevación, en metros

0.25 mile / 0.4 km
0.25 mile / 0.4 km

Map revised 06-20-22

WHAT TO KNOW ABOUT TSUNAMIS

A tsunami is a series of waves usually caused by a displacement of the ocean floor by an earthquake, volcanic eruption, or landslide. This sudden disturbance sends a series of sea waves, often called “waves of death,” toward coastal areas around the globe. The amplitude of the wave can be the same at every point and can be as high as 65 feet. Tsunamis can travel great distances over the ocean and are capable of causing death and destruction over vast areas of land. This makes them extremely dangerous and unpredictable.

WHAT TO DO FOR BOTH LOCAL AND DISTANT TSUNAMIS

Local Tsunamis

1. Evacuate on foot at all possible. Follow evacuation signs and arrows.
2. If you need help evacuation, something is wrong. Go on foot to high ground.
3. Stay away from potentially hazardous areas until you receive a local tsunami warning or ALL CLEAR from local officials. Remember, to escape from your home, a tsunami can come onshore within 15 to 20 minutes after the earthquake.
4. After an evacuation, check with local humanitarian groups for necessary supplies and local officials before you return to your home. Churches and other charitable organizations can pack and deliver supplies for you.

Distant Tsunamis

1. The warning for a distant tsunami will generally be indicated by an announcement over NOAA weather radio that the local tsunami warning has ended.
2. If you need help evacuating, tie something to your door knob and make it large.
3. Stay away from potentially hazardous areas until you receive an ALL CLEAR from local officials. Remember, to escape from your home, a tsunami can come onshore within 15 to 20 minutes after the earthquake.
4. After an evacuation, check with local humanitarian groups for necessary supplies and local officials before you return to your home. Churches and other charitable organizations can pack and deliver supplies for you.
